### Greetings from BlowHard!

## Education Station:

**It's not a Cone, it's not a Straight Jet, it's High-Flow Jet:  
The Only Expansion Jetstream!**

High-Flow Jet Technology is a revolutionary type of  
airstream developed by BlowHard.

In 2018 we launched High-Flow Jet in the  
Quickee and Commando.

This technology increases airstream entrainment  
resulting in high expansion and increased CFM to seal

the door yet sustain power, momentum, and directional flow to maximize ventilation and pressurization.

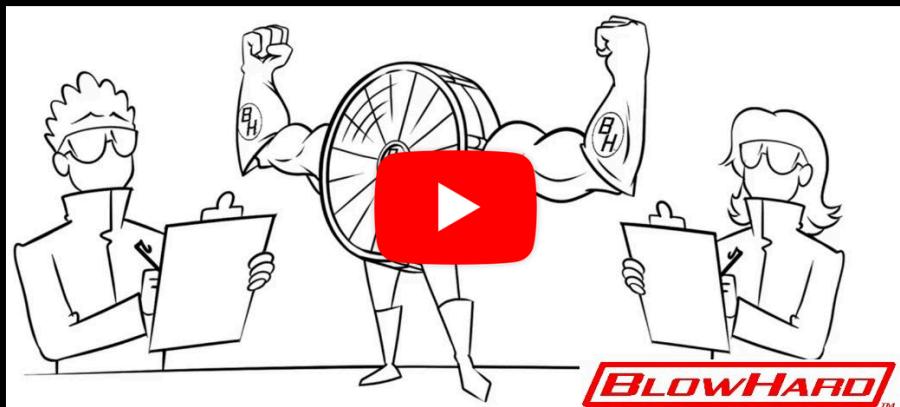

But why stop there?

In 2024 with the launch our X-Series line of fans, starting with the Squirt, we honed High-Flow Jet to entrain air at an even more aggressive rate, improving performance yet again!

This is a key reason the Squirt weighing in at only 38lbs with a small 17" blade outperforms it's predecessor, the Quickee, and all other battery-operated PV fans on the market except our own larger fans!

## High-Flow Expansion Jet

A new PPV Airstream!

## Did You Know?

When BlowHard designed the first folding PPV fan, it wasn't just to conserve space on the truck but also for weight distribution and ergonomics when carrying. Most of the weight is in the base of the fan, held closest to the body to be more settled and balanced

with less swinging and pulling.  
From the BH-20 to the Quickee to the Squirt, we've  
improved the design with each model!  
"More Than Just a Folding Fan!"

-----  
In Case You Missed Last Month...

## Education Station

We always talk about PPV fan performance  
but what about fan size?

In this video we compare sizes of the most  
common brands...and it's truly mind blowing!

BlowHard is on the move again and it's play time!
